PROFESSIONAL SUMMARY

AI/ML Engineer with 4 years of experience building production AI products across client engagements and internal product teams. Strong in LangGraph, LLM and RAG systems, Python backend engineering, React-based product delivery, AWS deployments, and translating ambiguous business problems into shipped software.

EXPERIENCE

Machine Learning Engineer | Codersarts

Apr 2023 - Present

AI products, client delivery, deployment ownership

- Built and shipped AI products using LLMs, RAG pipelines, semantic retrieval, Django, Flask, React.js, and AWS cloud infrastructure.
- Sole developer for Nova, an AI email automation product using Django, Flask, React.js, LLMs, and RAG; built a LangGraph assistant with persisted state, human approval, and email, calendar, Vonage, and Vapi tools.
- Lead backend engineer for Compelion, building and maintaining Django DRF APIs and AWS infrastructure for an AI-powered innovation management platform.
- Built CloudNotes as the sole developer and delivered production infrastructure with ECS and Fargate autoscaling, S3 and CloudFront hosting, and GitHub Actions CI/CD.
- Worked with LangGraph and AutoGen across Compelion, Nova, and Spark to implement agentic orchestration patterns in client-facing AI products.
- Built evaluation pipelines for tool calls, RAG, model behavior, prompt-injection checks, latency, and cost; used results to guide production model selection.
- Developed internal Codersarts products including Candidate Hub and Agents (CaaS), adding document ingestion, ambiguity checks, prompt-injection defenses, and role-based access control.
- Fine-tuned and deployed a Qwen 3.5 TTS model for internal content automation on RunPod with modular FastAPI APIs; reduced 12-minute audio generation to under 3 minutes.
- Worked on an NDA-covered embedded client engagement through Codersarts, delivering GIS analytics, chart-aware LangGraph assistants, HubSpot pipeline intelligence, and NPS monitoring dashboards.
- Built pSEO automation engines across Quizientia, Candidate Hub, Agents, and Compelion, generating 1,000+ pages with more than 60% unique AI-assisted content.
- Acted as product lead for Quizientia, aligning engineering with leadership priorities and then owning deployment to production.
- Served as primary technical contact for 20+ clients across discovery, demos, delivery, and production rollout conversations.

Machine Learning Engineer Intern | Codersarts

Aug 2022 - Mar 2023

Research prototypes and ML foundations

- Developed machine learning and computer vision models using TensorFlow and PyTorch.
- Built NLP pipelines for classification and sentiment analysis.
- Contributed to research prototypes in vision and deep learning.

SELECTED PRODUCT LEADERSHIP

Nova | Client Project

Sole developer for an AI email automation product; built a LangGraph assistant with persisted state, human approval, and business tool integrations alongside the Django, Flask, React.js, and AWS stack.

Compelion | Client Project

Lead backend engineer for an AI-powered innovation management platform built on Django DRF with AWS-backed cloud infrastructure and agentic orchestration workflows.

CloudNotes | Client Project

Sole developer for the product and owner of the end-to-end production deployment stack using ECS, Fargate, S3, CloudFront, and GitHub Actions CI/CD.

Embedded Client Work | NDA Engagement

Delivered GIS intelligence, chart-aware analytics assistants, HubSpot pipeline modeling, and NPS monitoring modules as part of a 6-month embedded client engineering team.

Candidate Hub | Internal Product

Developed semantic resume and JD matching focused on engineering depth rather than keyword-only filtering.

Agents (CaaS) | Internal Product

Built a reusable chatbot and agentic automation platform for business workflows and multi-industry use cases.

Quizentia and DocProcessing360 | Internal Products

Acted as product lead and deployment owner for Quizentia, and supported production rollout for DocProcessing360 document intelligence workflows.

CORE SKILLS

- **AI Systems:** LangGraph, LLMs, RAG, AutoGen, human-in-the-loop, tool calling, semantic retrieval, LangChain, TTS, vector databases, evaluation, model fine-tuning
- **Backend:** Python, Django, Django DRF, FastAPI, Flask, REST APIs, PostgreSQL
- **Frontend:** React.js, JavaScript, product-facing UI delivery
- **Cloud:** AWS ECS, Fargate, EC2, S3, CloudFront, ALB, Docker, RunPod, GitHub Actions CI/CD
- **Delivery:** 0-to-1 builds, evaluation and guardrails, client discovery, demos, deployment ownership, pSEO automation, mentoring

EDUCATION

M.Tech, Digital Manufacturing

SASTRA University | 2020 - 2022 | CGPA: 8.76

B.Tech, Mechanical Engineering

SRM Institute of Science and Technology | 2015 - 2019 | CGPA: 6.96

SELECTED CERTIFICATIONS

- MLOps Specialization, DeepLearning.AI
- IBM Full Stack Software Developer
- Docker, Kubernetes and OpenShift
- Microservices and Serverless Development
